SUMMARY

Final-year B.Tech Data Science & Engineering student building deployed full-stack and desktop products with React, Next.js, TypeScript, Python, FastAPI, Rust, and Tauri. Delivered a real-time platform with 31 HTTP routes and two WebSocket streams, deterministic evaluations, automated tests, CI/CD, and cloud deployments.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Rust, Java, C++

Frontend: React, Next.js, HTML, CSS, Tailwind CSS, responsive UI

Backend: FastAPI, Node.js, REST APIs, WebSockets, data ingestion and caching

Desktop / Data: Tauri v2, macOS Accessibility, Vision OCR, MongoDB, Oracle SQL, Pandas

Testing / Delivery: Pytest, Node test runner, deterministic evals, GitHub Actions, Docker, Render, Vercel, Railway

SELECTED PROJECTS

RaceDay - Real-Time Formula 1 Data Platform 2026

[GitHub](#) | [Live Demo](#)

Tech: Python, FastAPI, Pandas, Next.js, TypeScript, WebSockets, Docker, FastF1, OpenF1

Deployed platform for race stories, live companion views, strategy analysis, and interactive simulations.

- Normalized four historical, live, and weather providers into indexed and cached pipelines serving 31 HTTP routes and two WebSocket streams.
- Built pit-strategy and driver-swap simulation flows, live fallback states, and responsive Next.js dashboards.
- Added 21 backend and frontend tests covering API health, storage, live data, strategy logic, companion analysis, and client error handling.

Toki - AI-Assisted Desktop Workflow Guide In progress, 2026

[GitHub](#)

Tech: React, TypeScript, Rust, Tauri v2, Node.js, browser extensions, macOS Accessibility, Vision OCR

Cross-platform desktop assistant that understands the current screen and guides multi-step software workflows.

- Built a transparent cursor-adjacent overlay with screen capture, voice guidance, browser DOM candidates, macOS Accessibility, and OCR fallback paths.
- Implemented ranked target selection, candidate-based step verification, and confirmation gates for destructive, financial, account, and security actions.
- Maintained 77 passing guidance and safety tests, a 2/2 known-screen evaluation baseline, and successful TypeScript and eight-package Rust workspace checks.

InvoiceFlow AI - Finance Workflow Web Application 2026

[GitHub](#) | [Live Demo](#)

Tech: Python, FastAPI, retrieval, REST APIs, GitHub Actions, Render, HTML/CSS/JavaScript

Deployed AP/AR workflow for policy-grounded review, risk handling, human decisions, and auditability.

- Built nine FastAPI routes for sample and upload workflows, review queues, health checks, evaluation summaries, and result inspection.
- Created a seven-case deterministic evaluation suite; the committed report passes 7/7 cases across routing, extraction, citations, grounding, and anomaly checks.
- Added six API reliability tests plus a GitHub Actions threshold gate for structured errors, unsupported uploads, fallback behavior, and regressions.

OPEN SOURCE & SECURITY

Open Source Contributor | Keras ecosystem | 2026

- [Keras Hub PR #2799](#) (open, under review): fixed attention-score returns in CachedMultiHeadAttention and added regression coverage for TensorFlow, JAX, and PyTorch.
- [Keras.io PR #2390](#) (open, under review): fixed stale rolling-context behavior in the miniature GPT example and validated formatting and compilation checks.

Independent Security Researcher | HackerOne | 2026

- Submitted responsible-disclosure reports covering authorization, access control, session handling, and API behavior, with structured reproduction documentation.

EDUCATION

B.Tech, Data Science & Engineering | Manipal Institute of Technology | 2023-2027
